## **Cash Receipts**

Cash receipts are computed as marketing volume multiplied by the price and are usually reported on a **calendar-year** basis. Marketings come from current production or storage of past year's crop (assuming a crop is storable, such as potatoes). Thus, the quantity available for sale (marketings), can be thought of as coming from current production less shrinkage and the amount used on farms for food, feed and seed plus change in stored quantity (inventory). On the other hand, value of production, which is generally reported as a **crop-year** statistic, is computed as production multiplied by the average price. The difference between value of production and cash receipts is usually only important to those commodities which can be stored and thus have a specific marketing pattern which extends through time from the date of harvest.

Cash Receipts: All Commodities 1/

Commodity	2005	2006	2007	2008	2009 2/	
		1,000 Dollars				
Cotton lint, all	156,533	127,794	136,849	165,119	96,032	
Cottonseed	30,325	29,229	29,314	35,109	25,055	
Hay	139,812	171,849	179,233	264,928	208,501	
Wheat	26.003	29.789	42.479	112.629	69.782
